

Freestyle Libre – using Libreview and sharing data

To set up Libreview for the first time, go to the website and follow these steps:

<https://www.freestylelibre.co.uk/libre/products/libreview.html>

Share with your healthcare professional

LibreView allows you to share data with your healthcare professional easily when you connect with their LibreView Practice. When you are connected to their Practice, any data you upload to LibreView will be automatically stored and visible to your LibreView Care Team.

If you received an email invitation from your healthcare professional, follow the instructions in the email to allow the connection.

Otherwise, follow these steps to initiate the connection yourself.

1. Ask your healthcare professional for their Practice ID. A Practice ID is a unique code associated with each LibreView Practice. **Chesterfield Royal Hospital's practice ID is 00929250**
2. In LibreView go to the Settings Menu and select Account Settings
3. Click My Practices
4. Enter the Practice ID from your healthcare professional and click Add. You should now see their information in your Practice list.

Note: To stop sharing data with a Practice, click Remove next to the Practice name in the list. Then confirm you want to proceed with removal.
